## New Fly Protection for the Automatic Feeders SA 2 and SM1

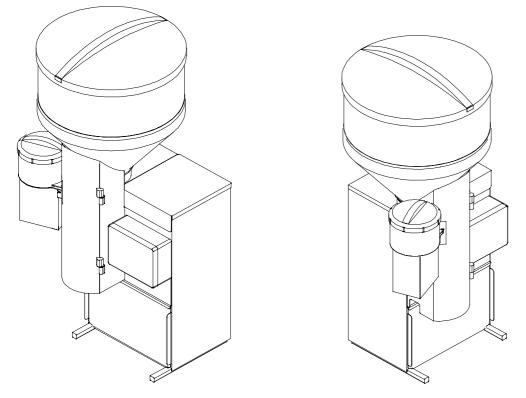

A newly designed large fly protection for Stand Alone 2 and SM 1 can be mounted in combination with the dispenser for powder additives.

Easy handling facilitates comfortable checking and cleaning of the machine.

The new fly protection can also be retrofitted on already existing machines. But in this case please observe the following:

- 1. The fly protection can only be retrofitted on machines being equipped with an intensive mixer with pentagonal mixer jar (as of June 1998) and narrow mixer jar bracket (approx. 11,1 cm width).
- 2. Already existing dispensers delivered before october 1, 1999 have to be converted into the new stepped case so that the fly protection as well as the additive dispenser can be used simultaneously.

The previous fly protection (item number 97375) will be sold further on.
